

Chemical Plant Operations

Our Program

Prepare for an entry-level position in a chemical plant with the Chemical Plant Operations Online Training Program. In the United States, there are thousands of chemical manufacturing facilities, run by chemical plant operators. These operators are highly paid and enjoy a stable work environment.

There are few institutions that provide training for entry-level operators, but this program will prepare students for the responsibilities of a chemical plant operator. Students will learn how to ensure units and process systems are functioning properly. They consider personnel safety as the primary objective and ensure production processes are operating safely. Operators continually monitor instrumentation and operation of equipment and they make the necessary adjustments to keep system process variables within acceptable ranges.

Labor Stats

Median salary:

\$55,900

which is higher than the national average across all occupations
